Appleton, WI 54911

HOW TO CARE FOR YOUR EYEWEAR:

- Always rinse off lenses with water before wiping or cleaning. Even tiny particles can be abrasive when rubbed across the lens surface.
- Clean your lenses by using mild soap and warm water or use the liquid cleaner specifically recommended by Eyewear Specialists for your eyewear. Gently cleanse the lens surface and rinse off or wipe off any residue. **NEVER USE CHEMICALS NOT DESIGNED FOR EYEGLOSS LENSES.**
- **Always use a soft, clean cloth** to wipe the lens surface after rinsing or cleaning. Use a 100% cotton towel or a lens cleaning cloth. NEVER use clothing (may have embedded dirt in the fibers) or paper products.
- **NEVER CLEAN YOUR LENSES WITH HOUSEHOLD PRODUCTS (GLASS CLEANER) BE SURE NOT TO EXPOSE THE LENSES TO AMMONIA OR ACETONE.**
- **NEVER** lay your glasses face down. Keeping the lens surface face up prevents them from coming into contact with objects that can scratch the lens surface.
- Store your eyewear in the eyeglass case when you are not using them.
- **NEVER KEEP YOUR EYEGASSES IN AN AUTOMOBILE WHERE TEMPERATRES INSIDE CAN REACH IN EXCESS OF 140 DEGREES.** High temperatures inside can warp and mis-shape the frame as well as cause damage to the lenses and lens coatings.
- **Use both hands to take off and put on your eyeglasses.** Single handed gripping can cause extra stress on the frame and lenses.
